

## Convert military hitch to 12 volt

You need to take the wire (yellow dash) from the circled terminal and move it into the slot to join the feed from the receptacle. You will then set the box to 12volt and feed the cable from your truck into the box for 12 volt power. No longer use the 24 Volt handle position.

## Convert military hitch to 12 volt

You should have this cable with the hitch. Take the big head off the cable and put the wires directly on your truck's batteries. The other end will plug into what was labeled the 24V receptacle of the box. ( you have converted it to feed 12V now)
